

Figure 1. Task-phase audit: target timing and concurrent stimuli

Phase	Concurrent display (source-code audit)	Analysis role
Shared Reward decision	Partner picture + name; high/low guess	Explicit decision nuisance EVs
Shared Reward outcome	Card value + valence symbol/color; no partner image/name	New phase-resolved outcome targets
Trust decision	Partner picture + investment choices	Separate partner decision EVs
Trust outcome	Partner text: shared/kept money + symbol/color; no face	Outcome targets; names/text remain
UGR cue → offer/choice	Human face or computer image remains during offer	Model-3 constants include cue through choice endpoint
UGR new categorical offer	Offer text/choice and face/computer cue	Offer onset → choice endpoint; pre-offer modeled separately

Source-code schematic, not screenshots. UGR remains visually confounded; no participant logs opened.
