

Empirical task-negative control • development only

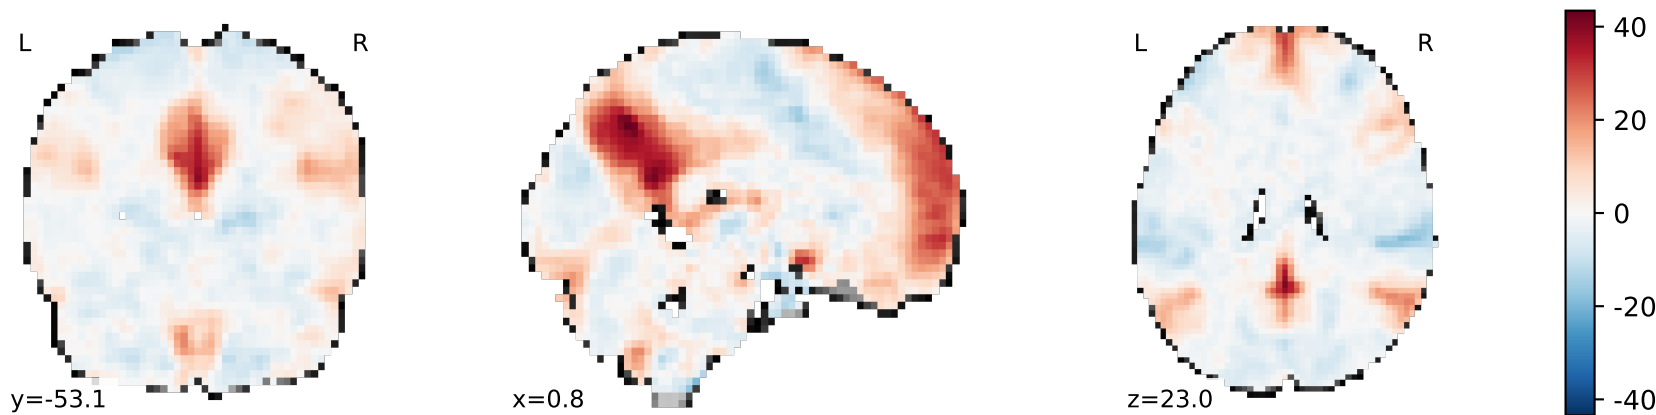

A1. Signed decision – fixation (raw mean COPE; blue = negative)

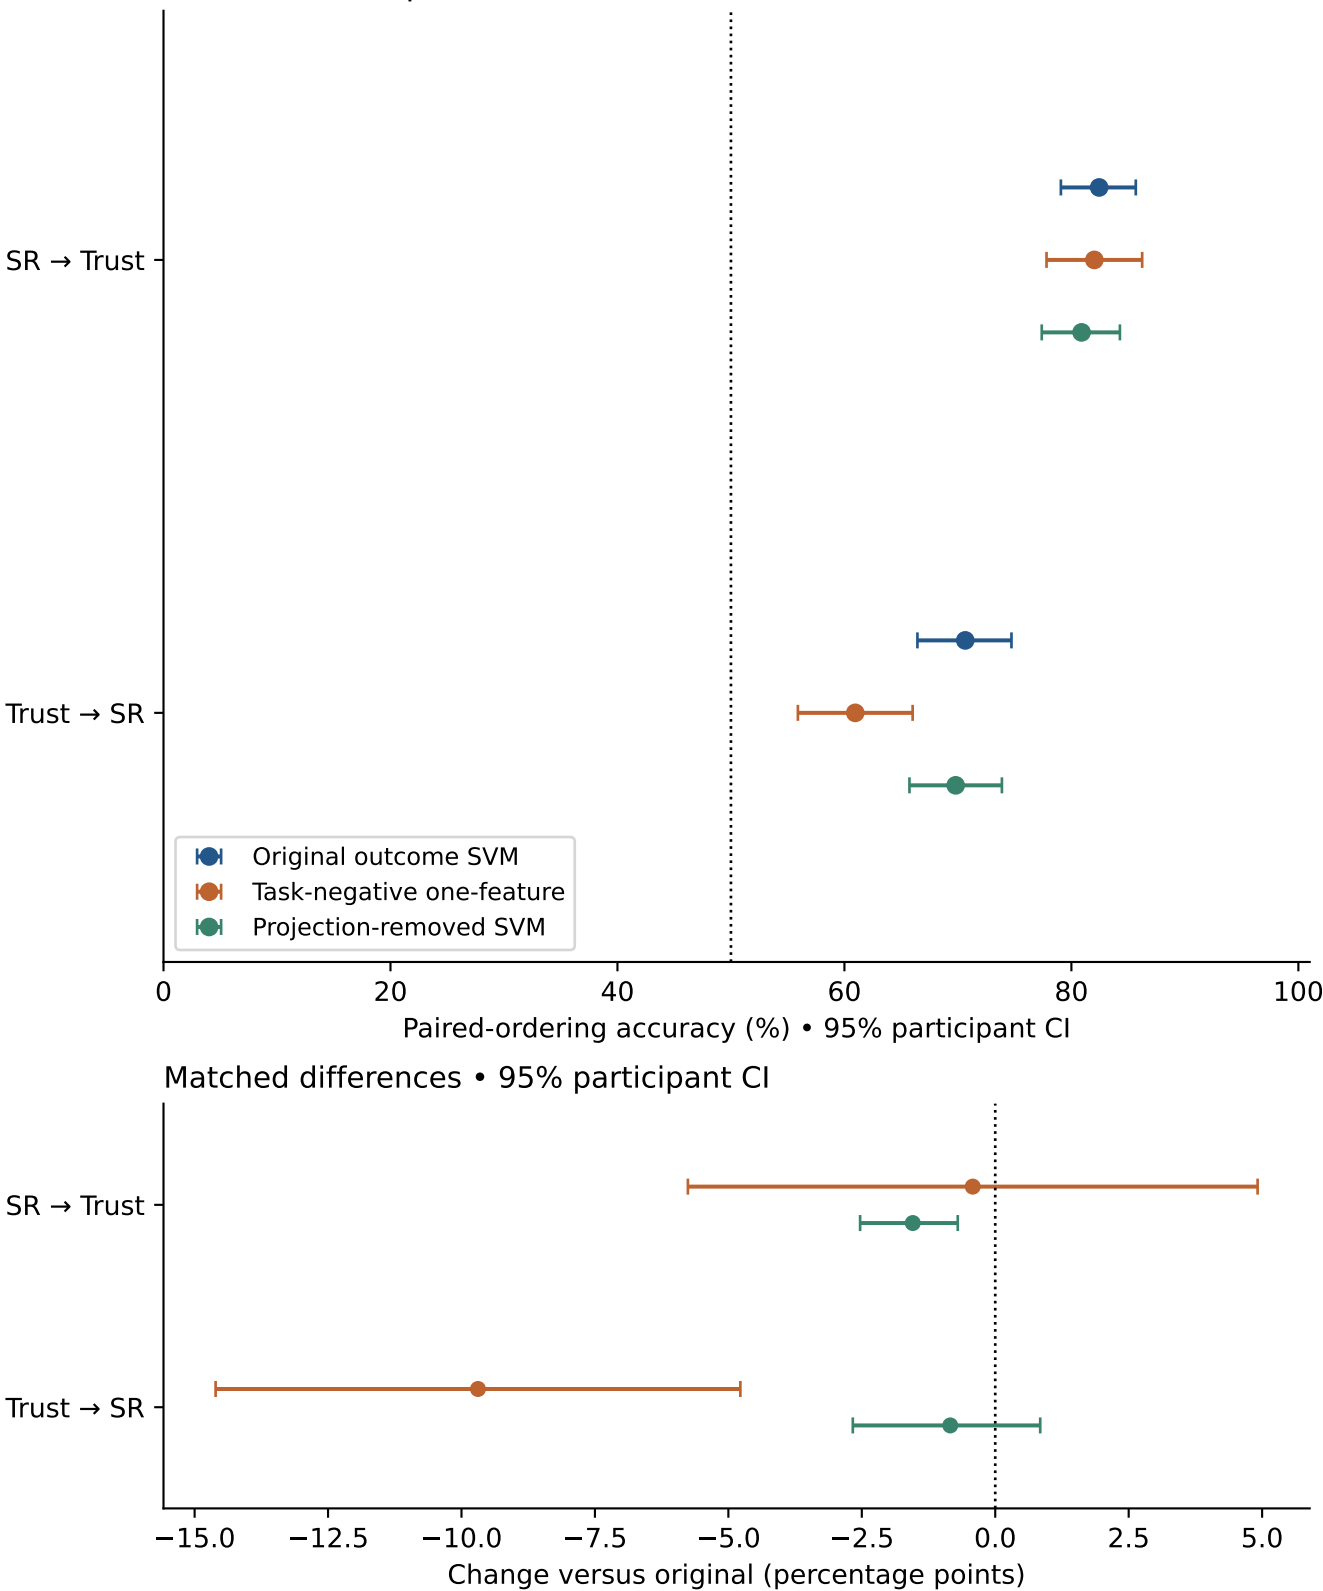

A2. Negative component, then centered + unit norm (direction units)

A3. Outcome human – computer Haufe (COPE / score units)

B. Human-computer transfers • matched N=178

Maps: full-development displays only; separate scales/units. All prediction templates use fold-training people only.
Fixed-prediction intervals omit refitting uncertainty. Protected validation remains unscored.
